

The proposed retaining wall separates EB SR-91 from the EB C-D road. The total length of the retaining wall between Wilmington Avenue and Acacia Court is approximately 1700 feet, and Central Avenue and Wilmington Avenue is approximately 2030 feet. At its maximum height, the retaining wall will be 10 feet above ground for a distance of approximately 450 feet between Wilmington Avenue and Acacia Court and approximately 200 feet between Central Avenue and Wilmington Avenue, and will taper off from there. The retaining wall is proposed to help with the existing elevation differences between the SR-91 mainline and the local roads, and will provide the safest traveled way for vehicles entering and exiting the C-D road.
